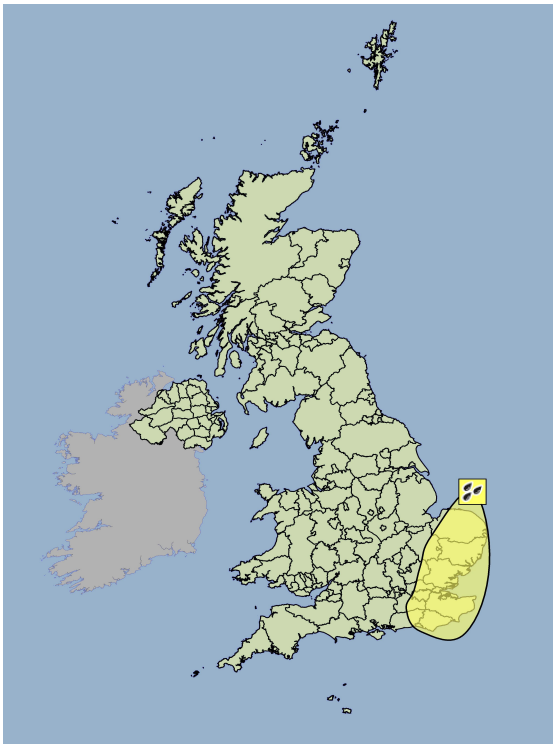
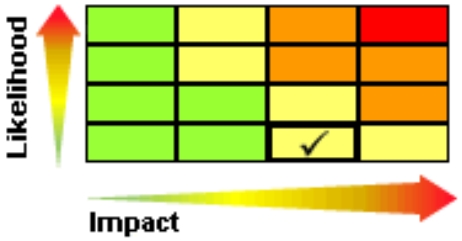
National Severe Weather Warning Service





Chief Forecasters Assessment
After another spell of hot weather there is the potential for thundery rain to affect parts of SE England. However the most likely outcome is considered to be a "near miss", where the worst of the thundery activity runs just to the south and east of UK land areas.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **18:00 on Fri, 02nd Aug 2013** until **09:00 on Sat, 03rd Aug 2013**

There is a low probability that heavy, thundery showers may affect parts of southeastern England later on Friday and at first on Saturday.

Since the issue of this Alert yesterday, the probability of heavy rain appears to have decreased, and if this trend continues, the Alert could yet be removed. But for the moment, the public should be aware that there is a possibility of localised disruption, should this occur.
